

Yohan VELAY

Fullstack Developer - IoT - DevOps | CDI

Coming from a family of IT professionals, I turned coding into one of my passions at the age of 8 (starting with Scratch, then Python). Passionate about computing, I continuously learn about the digital world. Comfortable working in a team, I enjoy growing through interaction with others; at the same time, I maintain a documented homelab (Proxmox, Docker, self-hosted services) where I explore and fine-tune my infrastructure.
